

VEX Robotics Competition

March 2017

Rachel Ireland-Jones

Overview

Although I have no code or examples to show as it was a few years ago, VEX Robotics was the starting point for me being interested in robotics and so I thought it important to include in my portfolio. I have linked the website we created at the time and included some photographs of our robot and the competition.

The competition basis was to design and build a Robot using VEX parts and the VEX version of C that would be able to pick up balls in an arena and throw them into a net. We won regionals and made it through to Nationals at the NEC in Birmingham where we won the Most Spirited Team award.
